TECHNICAL LAB OVERVIEW

Brand Concierge

In this lab, participants will learn how to configure and deploy a Brand Concierge experience that enables conversational product discovery and customer guidance within a governed Adobe Experience Platform environment. By building and connecting a Brand Concierge instance to approved knowledge sources, participants see how conversational AI can power real customer interactions while preserving brand, data, and governance controls.

Configure a Brand Concierge conversational experience: Create a Brand Concierge instance, define its purpose, and establish how the concierge should assist customers in discovering products, plans, and offers through natural-language conversation.

Connect the concierge to approved knowledge sources: Add website content and product catalogs as knowledge sources so the concierge can deliver accurate, contextual responses grounded in real business data rather than generic AI output.

Define brand expression and conversational behavior: Configure tone, style, response length, and guardrails to ensure the concierge reflects the intended brand personality while enforcing compliance and business rules.

Deploy and validate the end-to-end experience: Implement Brand Concierge on a website, verify the required Adobe Experience Platform onboarding and data capture, and interact with the live concierge to see how customer questions are interpreted, orchestrated, and answered in a production-style flow.

Why This Lab Matters for Marketers

Brand Concierge | Adobe Experience Platform | Agent Orchestrator | Adobe Experience Manager | Edge Delivery Services

Director of Marketing
Decision Maker

I STRUGGLE WITH...

- Designing a customer-facing conversational experience that's genuinely helpful, not just a generic chatbot.
- Making sure AI responses reflect my brand voice, approved offers, and real product details instead of vague or inconsistent answers.
- Understanding how conversational experiences are powered and governed so I can trust them to represent my business accurately.

I WANT TO...

- Launch a conversational experience that helps customers discover the right products, plans, and offers through natural-language interaction.
- Connect AI experiences directly to my website content and product catalog so customers get accurate, up-to-date information.
- Confidently deploy conversational AI on my site and explain how customer interactions are managed, tracked, and governed behind the scenes.

I LIKE HOW ADOBE...

- Lets me configure a Brand Concierge that's purpose-built for customer product discovery, not a one-size-fits-all chatbot.
- Uses Adobe Experience Platform to orchestrate conversations, enforce permissions, and capture interaction data in a governed way.
- Integrates with Adobe Experience Manager and Edge Delivery Services so I can deploy conversational experiences directly into my website as part of a real production workflow.

Technical Lab Journey

1.4.1 Getting started with Brand Concierge

-  **Brand Concierge overview**
-  **Brand Concierge instance configuration**
-  **AEP onboarding steps**

1.4.2 Implement Brand Concierge on your website

-  **Configure your website to show Brand Concierge – AEM Author**
-  **Configure your website to show Brand Concierge – GitHub**
-  **Test your configuration**

1.4.1.2

Brand Concierge Instance Configuration

In this step, you create and configure a Brand Concierge instance that defines how customers will interact with your brand. This establishes the foundation for conversational product discovery.

Defines concierge purpose and skills: Specifies what the concierge should help customers do.

Connects knowledge sources: Adds website content and product catalogs to power accurate responses.

Configures brand expression: Sets tone, style, response length, and guardrails for conversations.

1.4.1.3

AEP Onboarding Steps

In this step, you complete the required Adobe Experience Platform setup so Brand Concierge can operate in a governed environment. This ensures conversation data is properly captured and managed.

Configures AEP connectivity: Sets up the necessary datastream and platform context.

Enables data capture: Allows conversation interactions to be logged and analyzed.

Applies governance foundations: Ensures data handling aligns with enterprise controls.

1.4.2.1

Configure your website to show Brand Concierge – AEM Author

In this step, you prepare your website to display Brand Concierge using AEM authoring tools. This makes the concierge accessible to end users.

Creates a Brand Concierge page: Adds a new page dedicated to the conversational experience.

Adds the Brand Concierge block: Places the concierge component on the page.

Publishes and exposes navigation: Makes the experience visible through site navigation.

1.4.2.2

Configure your website to show Brand Concierge – GitHub

In this step, you update the website codebase to load and initialize Brand Concierge at runtime. This enables the concierge to function on the live site.

Adds required client libraries: Includes the scripts needed to run Brand Concierge.

Configures runtime initialization: Ensures the concierge loads and connects correctly.

Links site and platform services: Allows the website to communicate with platform services.

1.4.2.3

Test your configuration

In this step, you validate the full end-to-end Brand Concierge experience. This confirms the configuration and deployment were successful.

Launches the live experience: Opens the site with Brand Concierge enabled.

Tests conversational behavior: Verifies responses are accurate and contextual.

Confirms end-to-end flow: Ensures data, orchestration, and UI work together correctly.

Please open your laptops.

Strategic & Business Value

Fast, guided setup for non-technical teams

Turn existing web content into conversational answers

Out-of-the-box product advisory for “which product is right for me?”

On-brand, controlled AI voice

Preview and refine conversations before going live

Built-in feedback loop to improve answers over time
